Semi-Permanent Snake Fence

Snake Fences are taller than our newt barriers, specifically designed to prevent grass snakes and other small reptiles from entering construction sites to where they may encounter potential hazards.

Our 1mm thick HDPE fencing is UV stabilized and crafted from durable, recycled plastic, making it both eco-friendly and reusable. Supplied in 75m rolls with a lifespan of 5 years, this fencing is specifically designed to prevent small animals from accessing hazardous areas.

The Semi-Permanent Snake Fence is non-toxic, chew-resistant, and built to withstand wildlife interactions. Its design also minimises thermal expansion, ensuring it remains stable and free from distortion in hot weather.

Key Features

- > Protects small wildlife from entering hazardous areas
- > Tough for creatures to climb
- > Taller wildlife fencing
- > UV HDPE Stabilised
- > Weather-resistant
- > Lifespan of fencing: up to 5 years
- > Made from Recycled Plastic
- > Non-toxic & chew resistant
- > Low thermal expansion preventing distortion in hot weather

Roll of Black Semi-Permanent Snake Fence

Optional Refuge Tiles Available

Description	Life Span	Size (m)	Colour	Weight Per Roll (kg)
WLS310110 - Semi-Permanent Snake Fence	5 years	1.2m x 75m	Black	90

Refuge Tiles

Refuge Tiles are 500mm x 500mm and to create the ideal environment for amphibians and reptiles to shelter under. This can make it easier to find and gather newts where you need to relocate them.

 Refuge Tiles

Refuge Tile Setup

To improve capture chances, suitable refuges like carpet tiles can be placed along the fence line at regular intervals. These refuges should fit flush against the fence and may take about two weeks to settle enough to become effective. Rubber-backed carpet off-cuts (approximately 50 cm square) are moderately effective at creating the humid conditions needed and are heavy enough to resist being blown away.
