22 inch Rubbish Chute

The 22 inch yellow Rubbish Chute is designed for the efficient and safe disposal of rubble from elevated levels.

Lightweight yet durable, each section weighs only 9kg and is built for easy assembly using secure chain connections. Once linked, the sections form a highly reliable chute system. The chute also has an option to include Top Hopper with an enlarged opening to simplify loading and prevent spillage.

For added convenience, an interconnecting Side Hopper is available, allowing builders to load waste from multiple levels into a single skip efficiently.

Rubbish Chutes connected
